

Build a Stronger K-12 Cybersecurity Culture

K-12 districts are navigating an increasingly complex data landscape, balancing the responsibility to safeguard student and staff information with tight budgets, evolving threats, and limited security resources.

CDW partners with districts to strengthen data protection strategies that are practical, sustainable, and aligned to real-world constraints. In this EdTech™ magazine series, you'll learn how districts are building cybersecurity career pathways for students, fostering a culture of shared responsibility through user awareness training, and measurably reducing risk along the way. Then lean on CDW to help you design and operationalize a plan that moves cybersecurity beyond day-to-day response and into a coordinated, districtwide strategy that supports learning, resilience, and long-term growth.

K-12 Districts Train the Next Generation of Cybersecurity Professionals
